

The Aesthetica Approach to Nonsurgical Rejuvenation:

The Aesthetica Approach to Anti-Aging and Rejuvenation evolved around the idea that the factors that affect aging are multifactorial, and therefore the methods used to combat the appearance of aging also have to be multifactorial. Dr. Chang and the staff at Radiance have developed the **3 Step Anti-Aging and Rejuvenation package**. This Anti-Aging and Rejuvenation package has been created for your convenience and cost-effectiveness. First the Photofacial IPL Intense Pulse Laser is used to treat the appearance of brown age and sun spots. Next, the Pro-Fractional Laser Peel is used to treat fine lines and tighten skin. And finally, Botox and or fillers are used to plump up the deeper lines around the face.

Step 1: IPL Photofacial- For treatment of brown age and sun spots

Step 2: Pro-Fractional Laser- For treatment of fine lines and skin tightening

Step3: Botox and Facial Fillers- Plump up deeper lines and lips and cheeks (Juvederm, Restylane, Radiesse)

During your consultation with one of our Medical Aestheticians or Physicians, they will photograph your face with our state-of-the-art VISIA machine. This system not only pinpoints the degree of aging in your face and skin, but it will help you understand the treatment options available.

To take years off of your appearance, ask about our 3 Step Anti-Aging and Rejuvenation Package. And specifically ask about the Photofacial IPL Intense Pulse Light Laser, The Pro-Fractional Laser Peel, Botox, and Facial Fillers.
